Can large-scale battery energy storage systems participate in system frequency regulation?

In the end, a control framework for large-scale battery energy storage systems jointly with thermal power units to participate in system frequency regulation is constructed, and the proposed frequency regulation strategy is studied and analyzed in the EPRI-36 node model.

How a hybrid energy storage system can support frequency regulation?

The hybrid energy storage system combined with coal fired thermal power plant in order to support frequency regulation project integrates the advantages of "fast charging and discharging" of flywheel battery and "robustness" of lithium battery, which not only expands the total system capacity, but also improves the battery durability.

Does battery energy storage participate in system frequency regulation?

Since the battery energy storage does not participate in the system frequency regulation directly, the task of frequency regulation of conventional thermal power units is aggravated, which weakens the ability of system frequency regulation.
