Should you add solar panels to a garden shed?

Adding panels to a garden shed is a great option for homeowners that would like to increase their solar capacity but have run out of space on their property's roof for any more panels. Solar panels are a long-term commitment - the lifespan of solar panels is usually 25-30 years.

How much does it cost to install solar panels on a shed?

The average shed roof could fit four flexible solar panels, for a total cost of around \$1,120. Overall, solar panel costs will vary, depending on the number of solar panels being installed. The more solar panels you install, the more expensive it will be. The make, model, and type of solar panel will also affect the cost.

Can you afford solar panels in a shed?

Since the cost of solar panels is decreasing, you might be able to afford a decent-sized system - but you need to make sure the shed has plenty of space for the panels. When it comes to solar power generation, it all depends on how much energy you consume.

How many solar panels does a shed need?

The number of solar panels your shed needs depends on your personal goals. Three standard 350-watt (W) solar panels, taking up 6 square metres, can produce enough electricity to meet the needs of a shed that's been converted into an office or studio.
