How can CO2 be stored in Rotterdam?

Read more here. Porthos is developing a project to transport CO2 from industrial companies in the port of Rotterdam and store it in empty gas fields under the North Sea. Thanks to Porthos, some 2.5 million tonnes of CO2 will be captured annually and stored permanently.

What is the port of Rotterdam CO2 transport hub & offshore storage project?

With the infrastructure buildout phase underway, the groundwork is being laid down for the first large-scale Dutch carbon capture and storage (CCS) project, known as the Port of Rotterdam CO2 transport hub and offshore storage (Porthos) project, a joint venture between EBN, Gasunie and the Port of Rotterdam Authority.

How is CO2 reduced in Rotterdam?

The Climate Agreement explicitly chose CCS as one of the measures for CO2 reduction. In the Porthos project, CO2 from industry in the port of Rotterdam is captured, transported and stored in empty gas fields under the North Sea. Construction of Porthos has visibly started near Rozenburg.

How will Rotterdam transport CO2 to depleted gas fields?

Upon completion, the brand-new infrastructure will enable the transport of CO2 in the port of Rotterdam to depleted gas fields in the North Sea. Following the final investment decision (FID) in October 2023, Porthos began awarding assignments to the industry and the supply chain to realize the project.

Porthos has been recognised by the European Union as a project of common interest and has been awarded EUR102 million from the ...

With the infrastructure buildout phase underway, the groundwork is being laid down for the first large-scale Dutch carbon ...
