---

Distributed generation is generally a small electrical production facility that provides electricity to a home or business, with excess electricity sold to a utility. These production facilities can ...

Distributed Energy Resources New energy policies, cost-effective technologies, and customer preferences for electric ...

NY-Sun developed the Value Stack Calculator to help contractors better estimate compensation for specific solar and energy storage projects.

The Energy Storage and Distributed Resources Division (ESDR) works to enable and accelerate the development and adoption of new advanced technologies for reliable transportation and ...

Clean energy and energy storage systems need to be connected to the distribution grid through a process known as interconnection. As the number of installations rapidly ...

Projected Utility-Scale BESS Costs: Future cost projections for utility-scale BESS are based on a synthesis of cost projections for 4-hour duration systems as described by (Cole and Karmakar, ...

Battery, flywheel energy storage, super capacitor, and superconducting magnetic energy storage are technically feasible for use in distribution networks. With an energy density ...

The results suggest that while the cost of power electronics is lower in centralized topologies, the total cost is lower for distributed storage due to the avoided costs of installation ...

This report presents the Z Federal and DNV analysis and data update for distributed generation (DG), battery storage, and combined-heat-and-power (CHP) technology and cost inputs into ...

Solar-Plus-Storage Analysis For solar-plus-storage--the pairing of solar photovoltaic (PV) and energy storage technologies--NLR ...

NYSERDA has developed a series of webinars and presentation slides that can be shared with AHJs to aid in the siting and permitting of energy storage in New York that can be accessed here.

The SFS is designed to examine the potential impact of energy storage technology advancement on the deployment of utility-scale storage and the adoption of distributed storage, and the ...

Distributed energy resource (DER) systems are small-scale power generation or storage technologies (typically in the range of 1 kW to ...

Energy storage can be sited at three different levels: behind the meter, at the distribution level, or at the transmission level. Energy storage deployed at all levels on the electricity system can ...

Declining battery storage costs and the growing emphasis on resiliency and grid services have led to heightened interest in pairing battery storage with distributed solar to provide value to ...

With tariffs on Chinese imports the culprit, solar and energy storage pricing platform Anza Renewables expects cost volatility to ...
