How do I design an off-grid Solar System?

Designing an off-grid solar system can be complex. There are three factors to consider when sizing for off-grid solar: The most common off-grid system configurations range from 5kW to 21kW. However, energy usage varies for every household, so the best approach is to design a custom off-grid solar kit based on your specific energy usage patterns.

What is an 'off-grid' solar power system?

What is an 'off-grid' solar power system? An off-grid solar power system captures energy from sunlight and stores it in a battery bank for use in a structure which is beyond the reach of the main power grid.

How do off-grid solar power kits work?

This is then compared to what the solar systems will produce for the location you are using them. Off-grid solar power kits provide electricity in remote locations like homes, cabins, outbuildings, and other remote locations that are not served by the main power grid.

What is a DIY off-grid solar kit?

Deliver power to remote locations with our DIY off-grid solar kits. These kits contain the components you need to install a fully self-sufficient off-grid solar system, including solar panels, an off-grid inverter, and mounting materials. We'll also customize your kit with a battery bank sized to meet your storage needs.
