Will BMW build a high-voltage battery plant?

The construction of the assembly plant for high-voltage batteries is "going according to plan," BMW announced. The first construction work began on site in April 2024, and the workers laid the first pillar for the central production building at the end of June 2024.

Are battery storage systems generating revenue?

This has been reported by battery storage provider Tesvolt and its subsidiary Tesvolt Energy. Over several months, the outdoor storage system was tested in ten different customer projects. Those storage systems used exclusively for energy trading are already generating monthly revenues in the four- to five-figure range.

When will BMW's new battery assembly plant start?

Around a year after the start of construction work on BMW's new battery assembly plant in Lower Bavaria, the central production building has been completed. The technical building equipment is sufficiently advanced that the installation of the production facilities can begin on schedule in June.

How can Fraunhofer make battery production more sustainable?

At Fraunhofer, we create resource-efficient solutions for existing production processes that lower costs, waste and carbon emissions in the long term. This can help to make battery production more sustainable. The surging worldwide demand for batteries is currently met primarily by lithium-ion batteries.

The German PV and Battery Storage Market The first of its kind, this study offers an overview of the photovoltaics and battery storage market in ...

Commercial and industrial (C& I) BESS provider Tesvolt has begun construction of its latest 4GWh manufacturing plant in Germany.
