How much power does a control cabinet inverter have?

Our inverters for control cabinet installation have a power range from 0.25 to 160 kW and can be extended with optional plug-in modules. Variable cooling concepts ensure optimum heat dissipation. Why Inverters for control cabinet installation from NORD?

Which frequency inverters are suitable for control cabinets?

We have developed the NORDAC PRO family of frequency inverters especially for installation in control cabinets. These inverters are equally suitable for operating synchronous and asynchronous motors and meet all conceivable customer requirements thanks to a wide range of options.

Why should you choose a nordac pro inverter for control cabinet installation?

High performance with safety: NORD inverters with STO and SS1 We have equipped our NORDAC PRO inverters for control cabinet installation with extensive safety functions. The Safe Torque Off (STO) function switches off the motor torque, e.g. to prevent accidental starting or to initiate an emergency stop.

How do you wire an inverter to a main electrical panel?

Wiring the inverter to the main electrical panel requires careful attention to safety and local electrical codes. Turn off the main power and use the correct size of wire based on the anticipated amperage and voltage. Connect the inverter's output wires to a dedicated breaker in the panel, ensuring proper insulation and secure connections.
