What is battery energy storage capacity?

Battery energy storage capacity is the total amount of energy the battery can store, measured in kilowatt-hours (kWh) or megawatt-hours (MWh). Think of this as like the size of a water tank where you measure the water capacity in litres.

What is a kilowatt-hour battery?

A kilowatt-hour (kWh) is a measure of energy equivalent to one kilowatt of power used for one hour. In lithium batteries, it indicates how much energy can be stored or delivered over time. For instance, a battery with a capacity of 100 kWh can theoretically run a device that consumes 100 watts for 1,000 hours.

What is battery storage duration?

Battery storage duration describes how long the battery can discharge at its rated power. It's calculated: Energy Capacity (MWh) ÷ Power Rating (MW). A 4 MWh battery with a 1 MW power rating has a 4-hour duration. A 1 MWh battery with a 2 MW power rating has a 0.5-hour duration. We've written about storage duration in more detail [here](#).

What does kWh mean in a lithium battery?

In lithium battery systems, kWh indicates the total amount of electrical energy that can be stored within the battery. It reflects both nominal capacity--the maximum amount of charge--and usable capacity--what can actually be drawn without damaging the battery.
