Do Island power systems have centrally managed storage facilities?

Centrally managed storage facilities in island power systems dominate the relevant literature. Table 4 includes the papers dealing with the centrally managed storage concept. Table S2 of the Supplementary data and Fig. 7 present additional details for the most representative ones.

What are the best storage technologies for Islands?

Batteries and pumped-hydro storage have been identified as the leading storage technologies for islands, with the former effectively applicable to small and medium size system and the latter to large systems with natural reservoirs.

Why is electricity storage important?

Electricity storage is crucial for power systems to achieve higher levels of renewable energy penetration. This is especially significant for non-interconnected island (NII) systems, which are electrically isolated and vulnerable to the fluctuations of intermittent renewable generation.

Which storage typologies are suitable for deployment in island systems?

The review process identified three main storage typologies suitable for deployment in island systems: (a) storage coupled with RES within a hybrid power station, (b) centrally managed standalone storage installations, and (c) behind-the-meter storage installations. Of particular interest are the former two, which dominate the relevant literature.
