-----  
How much do solar panels cost?

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

How much does a solar system cost per watt?

Ultimately, many factors figure into the price per watt of a solar system, but the average cost is typically as low as \$2.75 per watt. This price will vary if a project requires special adders like ground mounting, a main panel upgrade, an EV charger, etc.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time.  $\text{Net cost of the system} / \text{lifetime output} = \text{cost per kilowatt hour}$

How do I calculate the cost of my solar system?

If you'd rather make your calculations offline, there are a few simple steps to estimate the cost of your solar system based on your electricity usage. To get started: Dig up some recent electricity bills (the more the better!) Divide your monthly consumption by 30 to get your daily electricity consumption.

How much does a photovoltaic power system cost? Hence, the experience curve is less pronounced. The overall resulting system CAPEX for photovoltaic plants is estimated to range ...

Discover 2025 solar power costs: \$2.50-\$5/watt installed. Get state pricing, tax credits, ROI calculations & savings estimates. Free ...
