**How do you use a solar power generator?**

Solar power generator solar panels are smaller and more portable than on-grid solar system panels, so you can move them around later on fairly easily if you need to. Plug your batteries into the charge controller. Connect the positive and negative cables from the batteries to the positive and negative terminals on the charge controller.

**What is a small Solar power generator?**

A small solar power generator is a relatively cheap, sustainable way to generate off-the-grid power when you need it. For example, if you have a cabin that you can't connect to a power grid and you don't want to rely on a traditional gasoline-powered generator, you might consider installing a small photovoltaic solar power system.

**How much does a solar power generator cost?**

Setting up a small solar power generator can cost you anywhere from about \$1200-\$4800 USD, depending on the size of the system. If you're not familiar with performing electrical work yourself, hire a licensed electrician to hook up all the components of your solar power system for you to avoid accidents.

**How do you connect a solar inverter to a battery system?**

Connect the inverter to the batteries. Run positive and negative battery cables from the battery system to the positive and negative terminals on the inverter. This will provide the solar power stored in the batteries to the inverter and convert it, so you can plug appliances that you want to use directly into the inverter.

Solar power works by converting sunlight into electricity through the photovoltaic effect. When sunlight hits the solar panels, the ...
