On-Site Renewables to Sustain Surrounding OperationsComputational Fluid Dynamics (CFD) SimulationsDestratificationSkylightsLighting Power Density (LPD) ReductionThe big idea: Many warehouses sustain a light power density (watts of lighting per square foot of room floor area) that exceeds what's actually needed in order to effectively perform required tasks. By recalibrating their LPD to suit the environment and what goes on inside of it, operators can reduce their overall energy&#160;use. 1. For example, as war...See more on crbgroup MINER Corporation[PDF]Energy Efficiency in Warehouse Facilities - minercorp Some of the most impactful decisions you can make when optimizing your facility's energy consumption include interior layout and organization.
