How do I maintain the vertical dx-120 digital telephone system?

Maintaining the Vertical DX-120 digital telephone system is a combination of customer database changes, facilities and apparatus moves, adds and changes. These requirements are accomplished by practicing the techniques, illustrations and step-by-step instructions listed in the previous sections of this manual.

What are the special considerations when configuring single base stations?

The following explains the special considerations when configuring single base stations. Although single base stations are not actually part of a channel group, their channel configurations (Configure > Base Station > Channels) must still select a channel group (Configure > Channel Group > Channel Groups).

How does a tb9400 base station work?

messages across IP networks. TB9400 base stations can send messages such as alarms to an IP address on the Tait Network. The base station's logs store messages in the syslog format. power connections for the reciter and front panel. Limited. voice and data traffic. transmit on one channel in a P25 Phase 1, P25 Phase 2, or analog network.

How do I configure a single base station?

Single base stations need a control connection to their site controller. A single base station interfaces to the site controller in the same way as the master base station in a trunked channel group. Select Configure > Network Interfaces > Trunking to configure this. You can program a receiver with the same configuration as a reciter.
