OverviewDevelopmentConstructionOperationSafetyApplicationsExternal linksFord Motor Company pioneered the battery in the 1960s to power early-model electric cars. In 1989 Ford resumed its work on a Na-S battery powered electric car, which was named Ford Ecostar. The car had a 100-mile driving range, which was twice as much as any other fully electric car demonstrated earlier. 68 of such vehicles were leased to United Parcel Service, Detroit Edison Company, US Post Office, Southern California Edison, Electric Power Research Institute, and California Air Resources Board
