In the first quarter of this year, China's five biggest solar companies reported a combined loss of over 8bn yuan, according to ...

The total solar capacity added from January to May 2025 reached nearly 198 gigawatts, marking a remarkable 388% increase from ...

Corporate support Onsite solar is a mature option that is widely adopted by corporations in China and has grown significantly over the past few years. Despite reduced subsidies, corporations ...

China Achieves 2030 Wind and Solar Power Installation Target Five Years Ahead of Schedule

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in addition to China's already ...

China is set to break new ground in its energy transition, with 2025 renewable capacity additions projected to exceed 500 GW, driven ...

China is on an accelerated path to shatter its renewable energy goals, poised to exceed its ambitious 2035 wind and solar power target of approximately 3.6 terawatts (TW) at ...

From just 4.1% of total generation in April 2020, solar power's share skyrocketed to 12.4% by April 2025--a threefold increase within ...

China has developed over 900 GW of wind and solar domestically over the past five years. And overseas investments have grown as well, particularly in Belt and Road ...

China is on an accelerated path to shatter its renewable energy goals, poised to exceed its ambitious 2035 wind and solar power target of ...

China has developed over 900 GW of wind and solar domestically over the past five years. And overseas investments have ...

China's green transition has made notable progress in the past four years, driven by its ambitious "dual carbon" goals. Key sectors such as green energy, sustainable infrastructure ...

This guide explores the technical features, types of solar installations, and the broader implications of China's solar energy initiatives. Insights into Solar Installation in China ...

China is setting unprecedented records in solar and wind energy installations, achieving monumental growth in May 2025.

In a ground-breaking achievement, China is well on track to achieve its 2030 renewable energy targets five years ahead of schedule, ...

From just 4.1% of total generation in April 2020, solar power's share skyrocketed to 12.4% by April 2025--a threefold increase within five years. This rapid expansion can be ...
