---

The US installed 50 gigawatts (GW) of new solar capacity in 2024, the largest single year of new capacity added to the grid by any energy technology in over two decades.

According to EIA, The electric power sector will add 26 gigawatts (GW) of new solar capacity in 2025 and 22 GW in 2026. These additions will boost U.S. solar generation by ...

China is on track to set a new record for solar power installations in 2024, driven by falling production costs and ...

In 2024, the United States achieved a remarkable milestone by adding a record-breaking 50 gigawatts (GW) of new solar capacity to its electrical grid. This achievement ...

In 2024, the US solar industry installed nearly 50 gigawatts direct current (GWdc) of capacity, a 21% increase from 2023. This was the second consecutive year of record ...

As of the end of 2024, the United States had 239 gigawatts (GW) of installed photovoltaic (utility and small scale) and concentrated solar power capacity combined. [3]

A staggering 428 gigawatts of solar capacity was installed last year -- more than in the previous two years combined.

OverviewSolar potentialHistorySolar photovoltaic powerConcentrated solar power (CSP)Government supportSee alsoFurther readingSolar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2024, utility-scale solar power generated 219.8 terawatt-hours (TWh) in the United States. Total solar generation that year, including estimated small-scale photovoltaic generation, was 303.8 TWh. As of the end of 2024, the United States had 239 gigawatts (G...

But by the end of 2024, it quietly rocketed into the top tier of solar adopters, importing a jaw-dropping 22 gigawatts worth of solar ...

Solar Module Battery States are shaded by capacity California leads as the top solar state. With over 54 GW of solar installed, enough energy to power over 15 million homes. Texas has the ...

The United States recently celebrated the installation of its 100th gigawatt of solar power. It took nearly two decades to reach the initial 100 GW, but the next 100 GW are ...

The country installed a record 50 gigawatts GW of new solar capacity last year, according to a report out this week from the Solar Energy Industries Association and Wood ...

As of 2021, the U.S. had enough installed solar capacity (121.4 gigawatts direct current -- GWdc) to power 23.3 million homes.7 ...

China is on track to set a new record for solar power installations in 2024, driven by falling production costs and increased ...

The U.S. solar industry installed 11.7 gigawatts (GW) of new capacity in Q3 2025, marking the industry's third-largest quarter on record and pushing total installations this year ...

Developers added 12 gigawatts (GW) of new utility-scale solar electric generating capacity in the United States during the first half of 2025, and they plan to add another 21 GW ...
