What happened at South Korea's state data center?

A fire at South Korea's state data center has brought around 70 government services offline. A lithium battery fire was reported at the National Information Resources Service in the central city of Daejeon, starting at around 8:20pm local time. Some 73 firefighters and 70 fire vehicles have been deployed.

What happened at a Daejeon data center?

Firefighters move a lithium-ion battery burned in a fire at the National Information Resources Service in Daejeon on Saturday. (Yonhap) A battery fire in the backup power system at a key government data center is raising concerns over the country's push to expand battery-based energy storage.

How did the NIRS data center affect South Korea?

The NIRS data center was the digital backbone for South Korea's government operations. Everything from identity verification and emergency call routing to postal logistics and administrative portals relied on it. The consequences were immediate and far-reaching. Essential government functions were interrupted. Emergency services were affected.

Will lithium-ion batteries become more popular in data centers?

The timing raises questions about an industry-wide technology shift. Lithium-ion batteries are projected to account for 38.5% of the data center battery market by 2025, up from 15% in 2020. "As lithium-ion systems gain traction, the safety envelope must tighten," said Tanvi Rai, senior analyst at Everest Group.

Imagine having a Swiss Army knife for electricity management - that's essentially what a 2MWh energy storage solution offers in today's power-hungry world. As industries scramble to ...

On September 26, 2025, a fire broke out at the National Information Resources Service (NIRS) data center in Daejeon, South Korea. What began as a maintenance task ...

The 4MW/2MWh containerized energy storage system was officially launched in August 2014. This system uses energy storage components based on the world's leading lifepo4 battery ...

The 2MWh energy storage system consists of 12 energy storage units. A single energy storage unit is made up of 1 lithium battery cluster. Each battery cluster is comprised of 19 battery ...

(Yonhap) A battery fire in the backup power system at a key government data center is raising concerns over the country's push to expand battery-based energy storage.

This incident is particularly severe, but there have been many like it through the battery energy storage system (BESS) industry, highlighting the need for further improvements ...

On September 26, 2025, a routine lithium-ion battery maintenance at South Korea's National Information Resources Service ...

Cloud Data Center 2mwh 2.5mwh Lithium Iron Phosphate Battery Energy Storage Cabinet, Find Details and Price about Battery 48V from Cloud Data Center 2mwh 2.5mwh Lithium Iron ...

Data Centers in Seoul - Colocation and Cloud facilities in Seoul (South Korea) at Data Center Map

Explore South Korea's booming data center industry in 2025--key players, growth trends, cultural drivers, and future predictions.

Hundreds of state services were still offline the day after a lithium battery exploded during maintenance work at a data center, officials said. The fire was extinguished on Saturday.

Explore 30 data centers in South Korea from 10 providers including kt IDC, Equinix, Dream-Mark1. Compare colocation facilities with 225+ MW capacity. Get quotes and find the perfect data ...

On September 26, 2025, a fire broke out at the National Information Resources Service (NIRS) data center in Daejeon, South ...

A major fire at South Korea's national data center has halted hundreds of online government services including postal and tax facilities, ...

The September 26 incident, triggered when a lithium-ion battery exploded during routine UPS maintenance at the facility in Daejeon, has paralyzed essential government ...
