What is the energy transition of Guangdong-Hong Kong-Macao greater Bay Area?

Energy transition of Guangdong-Hong Kong-Macao Greater Bay Area is simulated. Total energy consumption of GBA would show a slow grow until 2035. Energy intensities are expected to be reduced by 31-54% by 2035 compared to 2015. Energy self-sufficiency rate in the GBA is expected to increase to 25% by 2035.

What is the energy self-sufficiency rate in Guangdong-Hong Kong-Macao greater Bay Area?

Energy self-sufficiency rate in the GBA is expected to increase to 25% by 2035. Guangdong-Hong Kong-Macao Greater Bay Area (GBA) is one of the most dynamic economic urban agglomerations in China, which has a big proportion of the nation's total energy demand.

Can Guangdong-Hongkong-Macau achieve a low-carbon transition?

The Guangdong-Hongkong-Macau (GHM) region is a pilot demonstration area for practicing China's economic and energy policies. How the GHM region can achieve a low-carbon transition is quite concerning, as its energy supply is mainly derived from fossil fuels.

Which energy technologies are essential for low-carbon transition of GHM power system?

Nuclear, offshore-wind, and imported electricity dominate generation mix under CDM70, CDM85, and CDM100, and thus are essential for low-carbon transition of the GHM power system. The hourly dispatches of energy technologies under CDM70, CDM85, and CDM100 differ significantly from BAU as shown in the ESI, + Fig. S9-S12.

Abstract China has announced its ambitious targets towards carbon neutrality by 2060. The Guangdong-Hongkong-Macau (GHM) region, as a pilot demonstration area for ...

The Guangdong-Hongkong-Macau (GHM) region, as a pilot demonstration area for China's reform and opening-up, faces dual pressures on providing low-carbon electricity for ...
